

Project Update: August 2014

According to the Project activities field investigations of wood ants were conducted during June and July 2014 on Mt Ozren and Mt Trebevic. In laboratory ant samples were dry mounted and they are organised for morphometric analysis. Along with field investigations social media campaign has been launched. A group on Facebook: *Ants of Bosnia and Herzegovina* is established <https://www.facebook.com/groups/1434904570100324/>. The aim of this group is to promote conservation of wood ants through protection of coniferous woods in Bosnia and Herzegovina.
